

Kunhang Li

kunhangli@g.ecc.u-tokyo.ac.jp | [Website](#) | [GitHub](#)

EDUCATION

Department of Computer Science, The University of Tokyo

Tokyo, Japan

Master in Computer Science

10/2023 – 9/2025 (*Expected*)

- Research Area: Natural Language Processing, Multimodality
- Supervisor: [Yusuke Miyao](#)
- Scholarship: UTokyo Fellowship (10/2023 – 9/2025)
- Courses: [Applied Computer Graphics](#), [Visual Media](#), Reinforcement Learning

College of Engineering, Peking University

Beijing, China

Bachelor in Robotics

9/2019 – 7/2023

- Research Area: Natural Language Processing, Multimodality
- Supervisor: [Yansong Feng](#)
- Courses: Introduction to Robotics, Machine Learning, Artificial Intelligence, Mathematical Foundations of the Information Age, Foundations of Natural Language Processing

PROFESSIONAL EXPERIENCE

OMRON SINIC X Corporation

Tokyo, Japan

Research Intern

12/2024 – 3/2025

- Topic: AI-automated research idea generation

PUBLICATIONS (REFEREED)

- [Motion Generation from Fine-grained Textual Descriptions.](#)

Kunhang Li, Yansong Feng.

The Joint International Conference on Computational Linguistics, Language Resources and Evaluation (LREC-COLING), 2024.

PUBLICATIONS (NON-REFEREED)

- [How Much Can Large Language Models Guide Body Movements of 3D Digital Human Agents?](#)

Kunhang Li, Jason Naradowsky, Yansong Feng, Yusuke Miyao.

言語処理学会第31回年次大会 (NLP2025).

HIGHLIGHTED PROJECTS

Probing LLMs' Knowledge for Human Motion Generation

4/2024 – Present

The University of Tokyo | Master Project

Supervisor: Yusuke Miyao, Professor, Graduate School of Information Science and Technology

- Abstract: This project aims to explore the extent to which Large Language Models (LLMs) understand human motions. In particular, we seek to exploit LLMs' knowledge of human motions to generate 3D animations on a given human model in the computer graphics engine Unity, without any additional training data.

Motion Generation from Fine-grained Textual Descriptions

3/2023 – 10/2023

Peking University | Bachelor Graduation Project

Supervisor: Yansong Feng, Associate Professor, Wangxuan Institute of Computer Technology

- Abstract: We build a large-scale language-motion dataset specializing in fine-grained textual descriptions, FineHumanML3D, by feeding GPT-3.5-turbo with step-by-step instructions with pseudo-code compulsory checks. Accordingly, we design a new text2motion model, FineMotionDiffuse, making full use of fine-grained textual information.
- Highlights: Multimodality; Fine-grained Text2motion; Diffusion Model.
- Accomplishments: [Paper](#) accepted by LREC-COLING 2024.

OTHER PROJECTS

Digital Observatory

4/2024 – 4/2025

The University of Tokyo | Technical Staff

Supervisor: Yusuke Miyao, Professor, Graduate School of Information Science and Technology

- Abstract: The general background is to utilize LLMs and other language technologies (e.g., RAG) to predict the impact that global news might have on the global supply chain. As a technical assistant, I utilized LLMs to extract conflict-related information from massive amounts of news, and implemented a [demo webpage](#) to visualize such information.

Development of a Multilingual CCG Parser

10/2023 – 3/2024

The University of Tokyo | Technical Staff

Supervisor: Yusuke Miyao, Professor, Graduate School of Information Science and Technology

- Abstract: As the only contributor, I implemented a high-performance multilingual CCG parser for both CCGBank and multilingual CCG treebanks from the lab.
- Highlights: Multilingual CCG supertagging and A* supertag-factored parsing; Treebanks processing, training and evaluation.
- Accomplishments: The [project](#) was published with an easy-to-use interface.

Development of a CCG Parser

7/2022 – 9/2022

The University of Tokyo | Research Intern

Supervisor: Yusuke Miyao, Professor, Graduate School of Information Science and Technology

- Abstract: As the only contributor, I implemented a CCG parser comparable to SOTA ones from scratch, which paves the path to various kinds of phrase structure grammars (especially HPSG).
- Highlights: Hierarchical data class design; Neural CCG supertagging and parsing; Supertag-factored beam search and A* search.
- Accomplishments: The [project](#) was published on GitHub with an easy-to-use interface.

Semantic Analysis of Chinese Sports Instructions

7/2021 – 12/2022

Peking University | Research Assistant

Supervisor: Yansong Feng, Associate Professor, Wangxuan Institute of Computer Technology

- Abstract: This project aims to efficiently extract semantic information of bodily spatial states and changes from Chinese sports instructions.
- Highlights: Corpus construction of Chinese sports instructions; Annotation rule design (spatial semantic dependencies in predicate-argument structures); Annotation; Prediction system implementation (preprocessing, training, prediction and evaluation); Visualisation web service maintenance (built on brat).

TEACHING EXPERIENCE

- Teaching: TA for Foundations of Natural Language Processing (Peking University, April 2023)

SKILLS

- Programming and Technologies: Python (PyTorch), C, C++, C#, MATLAB, HTML, L^AT_EX, Markdown
- Natural Languages: Chinese (native), English (proficient, TOEFL 108), Japanese (intermediate), German (intermediate in reading)
